Abstract of JP2003301090

<P>PROBLEM TO BE SOLVED: To provide a polyester composition excellent in crystallization control properties and long-time continuous moldability; and a hollow molded article, a sheet-like product, and a stretched film, all obtained from the composition. <P>SOLUTION: This polyester composition which comprises chips of a polyester mainly comprising repeating ethylene terephthalate units, 0.1-500 ppm fine polyester powder, and 0.1 ppb to 50,000 ppm at least one resin selected from the group consisting of polyolefin resins, polyamide resins, and polyacetal resins, is characterized in that the composition further contains a germanium compound, a phosphorus compound, and a metal compound containing at least one element selected from the group consisting of aluminum, silicon, manganese, iron, cobalt, zinc, gallium, strontium, zirconium, tin, tungsten, and lead. <P>COPYRIGHT: (C)2004,JPO
